

# Dingo Dripper Ripper

With water restrictions in place in most towns and cities around Australia, conserving water has become a priority. To overcome water wastage problems when watering lawns it has become very popular to use more efficient underground dripper systems. This has led to the problem of 'How to install dripperline systems quickly and economically without damaging the existing lawn?'

Dingo, together with Netafim the inventors of drip irrigation and largest drip manufacturer in the world, have developed the Dripper Ripper to tackle this problem.

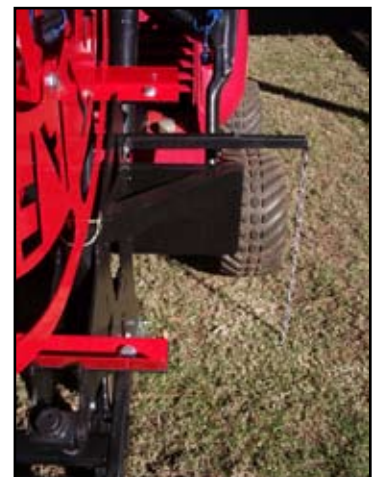

The press wheel also acts as a dept wheel to ensure the pipe is laid at a consistent depth. (Picture - above)

The Dripper Ripper cuts the grass, lays the pipe to the precise depth required and fills and presses the ground back together all in the one motion. This all in one action is fast, efficient and causes minimal disturbance to the lawn allowing it to recover quickly. (Picture - left)

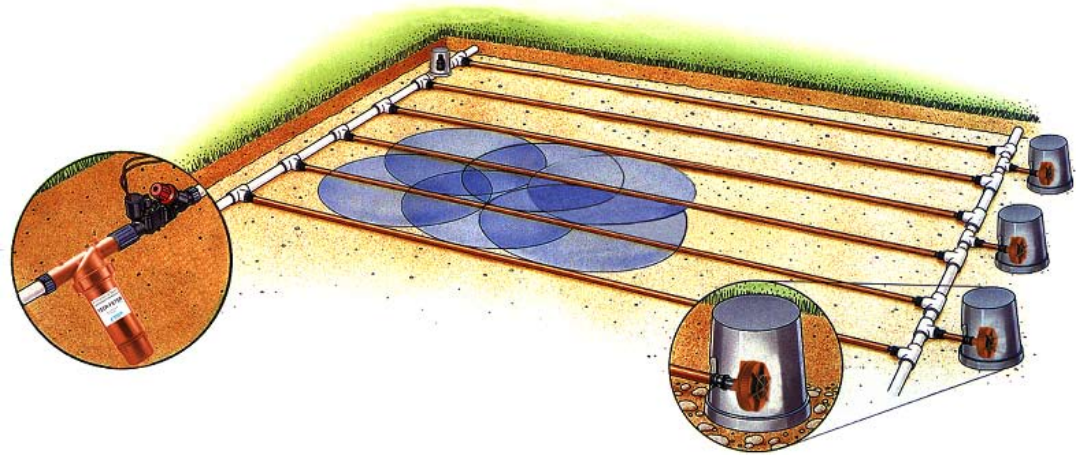

It is important for the dripper pipe to be laid evenly across the lawn so the Dripper Ripper is fitted with an adjustable gauge to help the operator lay the pipe at the correct spacings. (Picture - right)

## Netafim Dripperlines

Netafim dripperlines are pressure compensating, continuous self-flushing and are designed to be installed on-surface or subsurface. Due to their unique design features, the dripper lines are especially suited for subsurface installation in turf, gardens, and in on site waste water drip dispersal systems.

(Picture - right)

Netafim dripperlines are available in a variety of flow rates and dripper spacings to

maximize the soil's ability to handle the water. There are even dripperlines with built in check valves for additional water management and savings. (Picture - left)

### Facts At A Glance

Specifications:

- Pipe diameter - Up to 19mm
- Pipe Laying depth - up to 150mm
- Coil Sizes - 50m, 100m, 200m and 400m coils
- Netafim Landscape Dripperline Products- Scapeline, Techline and Techline AS
- Netafim re: SOURCE Dripperline Products- Bioline AS and UniBioline

Applications: Residential, Commercial, Sports Turf, Golf Courses, Parks & Recreational Areas, Highways & Medians, High traffic & high liability areas where quick installation is required, Areas using reclaimed or recycled water.

Used By: Irrigation Contractors, Landscaping Contractors.

Goes With Dingo: Trencher, Under Road Borer, Turf Cutter, Vibratory Plough.
