## Remote Controlled K9 – 4 Dingo

Paramount Specialized Services successfully cleaned 2 x Furnace Regenerators at a leading glass manufacturer in Melbourne Victoria by using a Remote Controlled K9 – 4 Dingo unit.

### Working Conditions:

- Confined Space
- Working Temperature: 50 – 70 degrees Celsius
- Type of product: Heavily Fused Clinker & Glass
- Environment: Dry and very dusty

Paramount S.S. have traditionally cleaned these furnaces using manual labour and Vacuum units, which would require man entry into a High Risk Confined space as described above. This would require additional manpower to continually rotate personnel within the Confined Space to meet the project time line.

In a drive to minimize man entry into a confined space and **Engineer out the Risk**, Paramount engaged the services of Dingo Melbourne to assess the task and recommend a suitable machine if at all possible.

Dingo recommended the K9 – 4 Remote Controlled Dingo as the most suitable unit which resulted in outstanding results. This not only eliminated the need for confined space entry but also increased the production rate by 100% and reduced the crew size by 50% without incident, therefore meeting all client KPI's and bringing the Project in on Time and below budget.

Yours sincerely  
Paramount Specialized Services Pty Ltd
